

HOMICIDES DURING SCHOOL HOURS

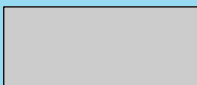

Project Summary:
 This map shows homicides from the year 2005 that occurred within one mile of a school. 2005 was the most recent LOJIC data available. The homicides took place between the hours of 6:15 am- 5:30 pm. The reason these times were chosen because high school student who catch a compound bus may be out walking as early as 6:15 am. Elementary school students may not reach home until 5:30 pm; also school is in session and/or after school activities may be taking place. The distance of a mile was picked because Jefferson County may require a high/middle school student to walk up to a mile to their bus stop or school.

Proposed Next Steps:
 Continue to monitor homicides in more recent years and the future. Safer walking routes and bus stops were fewer crimes have occurred.
